A Bright Future

Sirna and Sons Produce and First Energy took on a joint venture, utilizing First Energies “Energy Save OH” program. Sirnas initiated the replacement of all our high wattage lighting with a lower wattage, much more energy efficient lighting fixture.

THE PARTICULARS

Sirnas is replacing all our metal halide fixtures with new T8 vapor-tight fixtures. These fixtures earn Sirnas a 62% yield on kilowatts used, last up to 80% longer(which means less bulbs in our land fills). Plus the new lights are equipped with motion sensors that dim to 60% when areas are not in use.

What does that mean to our carbon footprint. We'll use 129,000 less kwh annually, and

reduce carbon dioxide emissions by 193,000 pounds per year. Which equates to planting 26 acres of trees.

Also, they don't produce heat, which means our refrigeration units won't have to work as hard. Plus the lights look great with more lumens(light output). Which of course helps everything at Sirna and Sons look “Greener”.
